

## Because real robots are autonomous: ARTI searches **ARTISTS**

We are a young, innovative start-up with focus on AI software for mobile autonomous robotics and headquarter in Gössendorf/Graz and we are looking for a

### Robotic Software Developer (f/m/d)

Employment Relationship

30-38,5 h/week

#### | Your tasks

- Your project is the development of new functions for a consumer robot and other autonomous robots.
- You will analyze the existing software solutions for optimization potential and develop them further on an ongoing basis.
- You will evaluate the software solutions through simulations and through tests with our existing testing-platform prototype.
- You will supervise your project independently and are in contact with our customers.

#### | Our requirements

- You have completed an education in the field of software development.
- You have good knowledge in software development and experience with mobile robotics (C++, ROS and environmental sensors).
- You are willing to travel to European countries and have good English skills.
- You work independently and with a hands-on mentality.

#### | We offer

- A young, very nice team incl. two easy-to-maintain robot prototypes. 😊
- Flexible working conditions (working hours, home office option, etc.) and good team spirit with flat hierarchies.
- Nice office premises in the Business Center Süd in Gössendorf with best infrastructure.
- More than collectively agreed minimum salary (KV IT, classification ST1): as example 30h (2.228 €), 38,5h (2.859 €).
- The opportunity to experience the development of a company from the very beginning and to advance promising technology!
